

Properly using a 3-compartment sink

How to set it up:

How to properly use a sanitizer sink set up:

Soak, flush or scrape dishes to remove food particles and soil.

Remove detergent from dishes by:
A. Submerging in clean, warm water
or
B. Flushing with overhead spray
rinse

Submerge dishes in approved chemical sanitizing solution for at least 1-2 minutes. Check the Manufacturer's guidelines for exact timing.

**You must have and use a test kit to check the strength of your sanitizer.
Air dry all sanitized dishes on the adjoining drain board. Do not towel dry dishes!**

*Sanitizing solution concentrations may differ with water pH, softness, and hardness. For more information regarding the specific solution concentration required for your operation, please contact Washtenaw County Environmental Health.
